

VERSION 02.15.08

Based on customer feedback we made the following changes:

- **Line Pattern:** In order to minimize the effects of fabric distortion, it is recommended to sample and stitch the line patterns in batches. The changes in the Line Pattern function made this much easier by retaining your last settings, including the pattern selection, height, flips and shifts. Please note that you need to select Add Pattern to return to the same settings. If you go back to the Main Menu, the Line Pattern settings will be cleared.

- **Quilt Sequence:** The system will remember the quilt sequence, but only until you make any changes (add, delete, modify, etc) to the quilt. The sequence will also be saved with the quilt.

- **Pattern Move/Delete:** Now you can select more than one pattern to be deleted or moved (copied). To add a pattern, touch its thumbnail image, to remove a previously selected one, touch the image again. Note that the program will not warn you if patterns with the same name exist in the destination catalog, it will overwrite them.

- **Split Shortcuts:** When you select the Modify or Copy shortcut buttons in Split, the program will return to the Split screen after you finished the pattern modification.
